

# V Seal

---

## **Product Description**

V Seal is an engineered, proprietary lost circulation product composed of naturally occurring cellulosic material with high concentrations of lignin within the fiber.

## **Typical Properties**

Composition	Lignin Cellulose Fiber
Specific Gravity	1.2
Color	Tan to Dark Brown
Bulk Density	18 – 24 lbs/ft <sup>3</sup>

## **Application**

V Seal is compatible with all types of oil based muds. The screen size ranges from 80 to minus 325 mesh. It performs well when added to pills or to the entire system and is compatible with other LCM additives.

## **Advantages**

- Will not rope
- Will not plug bits
- 40% acid soluble
- Very clean with no dirt and minimal moisture
- Slow degradation due to high lignin content

## **Recommended Treatment**

Treatments are based on the severity of the loss circulation. It can be used in concentrations of 2 lbs/bbl – 40 lbs/bbl. Pills and sweeps should use the larger concentrations while smaller concentrations are used when added to the entire mud system or in conjunction with other LCM additives

## **Packaging**

V Seal is packaged in 25 lb (11.3 kg) multi-walled paper bags. Each pallet contains 66 bags and is shrink-wrapped.
